Why These Tests Matter

Glioblastoma is one of the most aggressive brain cancers. No two glioblastomas are alike, and that's why a **Personalized Treatment Roadmap** is essential.

Knowing which genomic alterations are present in your glioblastoma tumor, can help your doctor choose the best treatment options for you.

The Glioblastoma Foundation's Gliolab offers **three advanced genomic tests to help every glioblastoma patient receive the most effective and targeted treatment plan.**

These tests can uncover key information about your tumor that isn't visible under a microscope. *Together, these tests guide your care team toward therapies most likely to work for you.*

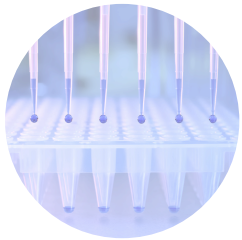

The Three Tests That Build Your Personalized Treatment Roadmap

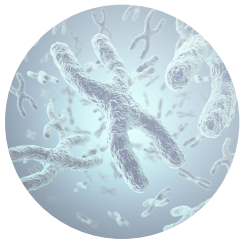

Whole Genome DNA Methylation Profiling (Epignostix Classifier)

- Identifies the precise molecular subtype of your tumor.
- Confirms or refines your diagnosis and reduces rates of mis-diagnosis.
- May detect rare or unusual tumor types that affect treatment choices.

Comprehensive Genomic Profiling (PGDx elio tissue complete)

- Detects mutations in 500+ cancer-related genes.
- Identifies actionable mutations, including those with clinical trial options.
- FDA-cleared test that can reveal targeted treatment options for you.

Gene Fusion Testing (Archer FusionPlex Pan Solid Tumor v2 Panel)

- Screens fusions in 137 genes.
- Detects rare but targetable gene rearrangements, like FGFR3-TACC3, commonly found in glioblastomas.
- Like Comprehensive Genomic Profiling, this test can also reveal options for targeted treatments.

Be Your Best Advocate

Doctors may not be aware of these specific tests or how to order them. That's where you come in.

What You Can Do

- **Learn about each test** — resources are available at www.gliolab.org.
- **Print this guide** and bring it to your next appointment.
- **Ask your doctor to order** all three Gliolab tests. *Gliolab is CLIA-certified and CAP-accredited.*
- **Explain** that having all three tests is necessary to create a complete, personalized treatment roadmap.

Ordering A Test at Gliolab

- Only a licensed physician can order the tests with insurance reimbursement.
- Your doctor's participation ensures you receive test interpretation, treatment guidance, and insurance support.
- At Gliolab, we work closely with your doctor in offering genomic testing through three different tests that make up your **Personalized Treatment Roadmap**.

Comprehensive Genomic Profiling

Gene Fusion Detection

Whole Genome DNA Methylation Profiling

What to Say to Your Doctor

“I’ve learned about three genomic tests offered by Gliolab that can help personalize my treatment plan for glioblastoma. These tests include DNA methylation profiling, comprehensive genomic profiling, and gene fusion testing. I’d like you to order them for me so we can make the most informed treatment decisions.”

Ordering is simple for your doctor — they can contact Gliolab directly:

Email: genomictesting@gliolab.org

Phone: 1-855-GLIOLAB

Website: www.gliolab.org

Cost and Access

Access to insurance should never mean a patient is not able to get these tests, at Gliolab:

- **Uninsured patients** pay nothing — your tests are supported by philanthropy.
- **Medicare patients** Medicare patients may qualify for zero out-of-pocket costs for certain services, including genomic testing, depending on your plan. Alternatively, you may have some out-of-pocket expenses associated with your care. These may include co-payments, co-insurance, and/or unmet deductible amounts depending on your Medicare plan. Our team will help you determine what your out-of-pocket costs will be.
- **Private insurance patients** Depending on the terms of your insurance plan, you may have financial responsibility for a co-pay, co-insurance, or a deductible as directed by your plan. Our team will help you determine what your out-of-pocket costs will be.

Our goal at Gliolab is to ensure every glioblastoma patient can access all of these tests and we will work with you to minimize out-of-pocket costs.

Questions

We're here to help. If you have any questions about how Gliolab's suite of genomic tests, designed for glioblastoma, could help you and your doctor develop a **personalized treatment roadmap**, or if you would like more information about the testing and billing process, please contact us.

Take Charge Today

You only get one chance to treat glioblastoma right the first time. Get the tests that give you and your care team the most accurate, detailed understanding of your tumor — so *you can get the best possible treatment.*

Bring this guide to your doctor. Ask for all three Gliolab genomic tests.

Let's build your personalized treatment roadmap — together.
